DARA
DEVELOPMENT IN AFRICA WITH RADIO ASTRONOMY

The named trainee has successfully completed the following DARA Basic Training programme. The programme provided an introduction to optical and radio astronomy and consisted of seven weeks of intensive training courses spread over the period of one year as outlined below.

Course Title	Content
Linux and Python Training	Introductory course focusing on Linux and Python delivered by CHPC, South Africa.
Optical Astronomy Training	The use of optical telescopes and data analysis at the Turkana Basin Institute, Kenya using facilities from the University of Edinburgh and Technical University of Kenya.
Radio Astronomy Training	The use of single-dish radio telescopes, receivers and Very Long Baseline Interferometry techniques at the Hartebeesthoek Radio Astronomy Observatory in South Africa.
Radio Astronomy Data Reduction and Analysis	Reduction and analysis of Very Long Baseline Interferometry data.
Annual Network Meeting	Entrepreneurship, business start-ups, career skills and development training.
